IEE Proceedings

GENERATION, TRANSMISSION AND DISTRIBUTION

The Institution of Electrical Engineers, Savoy Place, London WC2R 0BL, United Kingdom
Publishing Department: Michael Faraday House, Six Hills Way, Stevenage, Herts. SG1 2AY, United Kingdom

Volume 149 2002 UK ISSN 1350–2360

HONORARY EDITORS

Prof. E.J. Handschin (*University of Dortmund*)
Prof. J.R. McDonald (*University of Strathclyde*)
Dr. B. Fox (*The Queen's University of Belfast*)

Pages in issues of *IEE Proc., Gener. Transm. Distrib.* 2002

Pages	Issue No.	Date
1–120	1	January
121–248	2	March
249–376	3	May
377–504	4	July
505–632	5	September
633–760	6	November

Z

Zaki, A.M. p108
Zambroni de Souza, A.C. p165
Zhan, C. p533

AC MACHINES

Co-ordinated control of generator excitation and STATCOM for rotor angle stability and voltage regulation enhancement of power systems p659
Contributions of individual generators to complex power losses and flows. I. Fundamental theory p182
Contributions of individual generators to complex power losses and flows. II. Algorithm and simulations p186
Effective algorithm for handling constraints in generator maintenance scheduling p274
Electrical generators for direct drive wave energy converters p446
Passivation controller design for turbo-generators based on generalised Hamiltonian system theory p305

ASYNCHRONOUS MACHINES

Analysis of isolated self-excited induction generator feeding a rectifier load p90
Damping subsynchronous resonance in power systems p679
Steady-state analysis and performance of a single-phase self-regulated self-excited induction generator p233
Transient performance of three-phase self-excited induction generator during balanced and unbalanced faults p50

CABLES AND OVERHEAD LINES

Earth faults and related disturbances in distribution networks p283
Lessons learned from the power outages on 29 July and 21 September 1999 in Taiwan p543
Long arc in free air: laboratory testing, modelling, simulation and model-parameters estimation p319
Pulse width modulated series compensator p71
Reliability evaluation of hybrid multiterminal HVDC subtransmission systems p571
Review of the basic insulation level for 400 kV oil-filled cable systems under lightning events p550
Rigorous analysis of back-flashover outages caused by direct lightning strokes to overhead power lines p58
Study of four-phase power transmission systems p397
Transient voltage and current distributions on transmission lines p705

CAPACITORS

Investigation of the performance of a photovoltaic AC module p472

CIRCUIT COMPONENTS

Three-phase single-stage high-voltage DC converter p505

CONTROL EQUIPMENT

Experimental studies with simple neuro-controller based excitation controller p108

CONTROL SYSTEM ANALYSIS

Application of cell immune response modelling to power system voltage control by STATCOM p102
Assessment of generator impact on system power transfer capability using modal participation factors p564
Control of a battery supported dynamic voltage restorer p533
Damping subsynchronous resonance in power systems p679
Decentralised DC load flow and applications to transmission management p600
Design of UPFC controllers and supplementary damping controller for power transmission control and stability enhancement of a longitudinal power system p463
Evaluation of convergence rate in the auxiliary problem principle for distributed optimal power flow p525
Initialisation of the augmented Hopfield network for improved generator scheduling p593
Load-frequency control and inadvertent interchange evaluation in restructured power systems p607
Optimal allocation of transmission rights in systems with FACTS devices p359
Passivation controller design for turbo-generators based on generalised Hamiltonian system theory p305
Pulse width modulated series compensator p71
Robust damping controller design for a static compensator p491
Robust FACTS control design using the H loop-shaping method p352
Robust nonlinear co-ordinated excitation and TCSC control for power systems p367
Robust pole placement versus root-locus approach in the context of damping interarea oscillations in power systems p739
Robust tuning of power system stabilisers using a Lyapunov method based genetic algorithm p585
Use of an optimal criterion for co-ordinating FACTS-based stabilisers p345

CONTROL SYSTEM STABILITY

Application of cell immune response modelling to power system voltage control by STATCOM p102
Co-ordinated control of generator excitation and STATCOM for rotor angle stability and voltage regulation enhancement of power systems p659
Damping of the low-frequency oscillations of the generator: dynamic interactions and the effectiveness of the controllers p753
Damping subsynchronous resonance in power systems p679
Design of UPFC controllers and supplementary damping controller for power transmission control and stability enhancement of a longitudinal power system p463
Experimental studies with simple neuro-controller based excitation controller p108
Method for considering uncertainties for robust tuning of PSS and evaluation of stability limits p295
Robust damping controller design for a static compensator p491
Robust damping of interarea oscillations with unified power-flow controller p733
Robust nonlinear co-ordinated excitation and TCSC control for power systems p367
Robust pole placement versus root-locus approach in the context of damping interarea oscillations in power systems p739
Robust tuning of power system stabilisers using a Lyapunov method based genetic algorithm p585
Self-correction two-machine equivalent model for stability control of FACT system using real-time phasor measurements p389
Torsional interaction between an SSSC and a PSS in a series compensated power system p653
Use of an optimal criterion for co-ordinating FACTS-based stabilisers p345

CONTROL SYSTEM SYNTHESIS

Application of cell immune response modelling to power system voltage control by STATCOM p102
Control of a battery supported dynamic voltage restorer p533
Decentralised DC load flow and applications to transmission management p600
Design of UPFC controllers and supplementary damping controller for power transmission control and stability enhancement of a longitudinal power system p463
Initialisation of the augmented Hopfield network for improved generator scheduling p593
Load-frequency control and inadvertent interchange evaluation in restructured power systems p607
Optimal allocation of transmission rights in systems with FACTS devices p359
Passivation controller design for turbo-generators based on generalised Hamiltonian system theory p305
Pulse width modulated series compensator p71
Robust damping controller design for a static compensator p491
Robust FACTS control design using the H loop-shaping method p352
Robust nonlinear co-ordinated excitation and TCSC control for power systems p367
Robust pole placement versus root-locus approach in the context of damping interarea oscillations in power systems p739
Robust tuning of power system stabilisers using a Lyapunov method based genetic algorithm p585
Use of an optimal criterion for co-ordinating FACTS-based stabilisers p345

DC MACHINES

Contributions of individual generators to complex power losses and flows. I. Fundamental theory p182
Contributions of individual generators to complex power losses and flows. II. Algorithm and simulations p186
Effective algorithm for handling constraints in generator maintenance scheduling p274

DIELECTRIC MATERIALS AND DEVICES

Review of the basic insulation level for 400 kV oil-filled cable systems under lightning events p550

ELECTRIC DISCHARGES

Comment on 'Effect of surface charge on hydrophobicity levels of insulating materials' p300
Dynamic current-zero behaviour of wall-stabilised arc in different arc-quenching media p510
Genetic algorithm approach to the modelling of polluted insulators p373
Long arc in free air: laboratory testing, modelling, simulation and model-parameters estimation p319
Rigorous analysis of back-flashover outages caused by direct lightning strokes to overhead power lines p58

ELECTROMAGNETISM

Comment on 'Effect of surface charge on hydrophobicity levels of insulating materials' p300

ELECTRIC VARIABLES CONTROL

A flexible DSTATCOM operating in voltage or current control mode p215
A simple control scheme for hybrid active power filter p485
Application of cell immune response modelling to power system voltage control by STATCOM p102
Assessment of generator impact on system power transfer capability using modal participation factors p564
Capability charts for combined cycle power plants p407
Co-ordinated control of generator excitation and STATCOM for rotor angle stability and voltage regulation enhancement of power systems p659
Control of a battery supported dynamic voltage restorer p533
Damping of the low-frequency oscillations of the generator: dynamic interactions and the effectiveness of the controllers p753
Experimental studies with simple neuro-controller based excitation controller p108
Interior point method applied to voltage collapse problems and system-losses-reduction p165
Load-frequency control and inadvertent interchange evaluation in restructured power systems p607
Maximising penetration of wind generation in existing distribution networks p256
Multipurpose shunt active power conditioner p719
Power system voltage control by multiple STATCOMs based on learning humoral immune response p416
Pulse width modulated series compensator p71
Robust damping controller design for a static compensator p491
Steady-state analysis and performance of a single-phase self-regulated self-excited induction generator p233
Torsional interaction between an SSSC and a PSS in a series compensated power system p653
Transformerless dynamic voltage restorer p263

ENERGY CONVERSION

Control of a battery supported dynamic voltage restorer p533
Investigation of the performance of a photovoltaic AC module p472
Robust pole placement versus root-locus approach in the context of damping interarea oscillations in power systems p739
Transformerless dynamic voltage restorer p263
Transient performance of three-phase self-excited induction generator during balanced and unbalanced faults p50

ENGINEERING COMPUTING

Application of cell immune response modelling to power system voltage control by STATCOM p102
Decentralised DC load flow and applications to transmission management p600
Evaluation of convergence rate in the auxiliary problem principle for distributed optimal power flow p525
Initialisation of the augmented Hopfield network for improved generator scheduling p593
Load-frequency control and inadvertent interchange evaluation in restructured power systems p607
Optimal allocation of transmission rights in systems with FACTS devices p359
Pulse width modulated series compensator p71
Use of an optimal criterion for co-ordinating FACTS-based stabilisers p345

EXPERT SYSTEMS

Abductive network model-based diagnosis system for power transformer incipient fault detection p326
Global model for short-term load forecasting using artificial neural networks p121

FEEDBACK

Co-ordinated control of generator excitation and STATCOM for rotor angle stability and voltage regulation enhancement of power systems p659
Robust nonlinear co-ordinated excitation and TCSC control for power systems p367
Self-correction two-machine equivalent model for stability control of FACT system using real-time phasor measurements p389

INSULATORS AND INSULATION

Abductive network model-based diagnosis system for power transformer incipient fault detection p326
Comment on 'Effect of surface charge on hydrophobicity levels of insulating materials' p300
Dynamic current-zero behaviour of wall-stabilised arc in different arc-quenching media p510
Genetic algorithm approach to the modelling of polluted insulators p373
Iterative method for waveshape restoration of directly measured lightning flash currents p66
Lessons learned from the power outages on 29 July and 21 September 1999 in Taiwan p543
Nonstandard method for accelerated ageing tests of nonceramic insulators p439
Review of the basic insulation level for 400 kV oil-filled cable systems under lightning events p550
Rigorous analysis of back-flashover outages caused by direct lightning strokes to overhead power lines p58

LOGIC CIRCUITS

Three-phase single-stage high-voltage DC converter p505

MAGNETIC MATERIALS AND DEVICES

Incorporating capacitance into partial-core transformer models to determine first natural resonant frequencies p746

MATHEMATICAL TECHNIQUES

Combined wavelet transform and regression technique for secondary current compensation of current transformers p497
Constant Jacobian matrix and its application to fast trajectory simulation of power systems p210
Damping subsynchronous resonance in power systems p679
Efficient multiway graph partitioning method for fault section estimation in large-scale power networks p289
Enhanced genetic algorithm-based fuzzy multi-objective approach to distribution network reconfiguration p615
Fuzzy decision-making in stochastic multiobjective short-term hydrothermal scheduling p191
Genetic algorithm for supply restoration and optimal load shedding in power system distribution networks p145
Quantifying electric power quality via fuzzy modelling and analytic hierarchy processing p44
Robust damping of interarea oscillations with unified power-flow controller p733
Robust FACTS control design using the H loop-shaping method p352
Test systems and mathematical models for transmission network expansion planning p27
Torsional interaction between an SSSC and a PSS in a series compensated power system p653
Transient voltage and current distributions on transmission lines p705
Using voltage measurements to improve the results of branch-current-based state estimators for distribution systems p667
Wavelet-based signal processing for disturbance classification and measurement p310

MEASUREMENT OF SPECIFIC VARIABLES

Iterative method for waveshape restoration of directly measured lightning flash currents p66
Using voltage measurements to improve the results of branch-current-based state estimators for distribution systems p667

MICROPROCESSORS

Experimental studies with simple neuro-controller based excitation controller p108

MULTIVARIABLE CONTROL SYSTEMS

Decentralised DC load flow and applications to transmission management p600
Passivation controller design for turbo-generators based on generalised Hamiltonian system theory p305

NEURAL NETWORKS

Application of cell immune response modelling to power system voltage control by STATCOM p102
Artificial neural network based peak load forecasting using Levenberg-Marquardt and quasi-Newton methods p578
Electric power quality disturbance classification using self-adapting artificial neural networks p98
Experimental studies with simple neuro-controller based excitation controller p108
Global model for short-term load forecasting using artificial neural networks p121
Initialisation of the augmented Hopfield network for improved generator scheduling p593
Locational marginal price forecasting in deregulated electricity markets using artificial intelligence p621
Multipurpose shunt active power conditioner p719
Regularisation of neural networks for improved load forecasting in the power system p340

NONELECTRIC VARIABLES CONTROL

Passivation controller design for turbo-generators based on generalised Hamiltonian system theory p305

NONLINEAR CONTROL SYSTEMS

Robust nonlinear co-ordinated excitation and TCSC control for power systems p367

NUMERICAL ANALYSIS

Adaptive underfrequency load shedding integrated with a frequency estimation numerical algorithm p713
Analysis of isolated self-excited induction generator feeding a rectifier load p90
Artificial neural network based peak load forecasting using Levenberg-Marquardt and quasi-Newton methods p578
Compact and flexible three-phase power flow based on a full Newton formulation p225
Damping subsynchronous resonance in power systems p679
Electric power quality disturbance classification using self-adapting artificial neural networks p98
Initialisation of the augmented Hopfield network for improved generator scheduling p593
Iterative method for waveshape restoration of directly measured lightning flash currents p66
Iterative solvers in the Newton power flow problem: preconditioners, inexact solutions and partial Jacobian updates p479
Long arc in free air: laboratory testing, modelling, simulation and model-parameters estimation p319
Robust FACTS control design using the H loop-shaping method p352
Robust pole placement versus root-locus approach in the context of damping interarea oscillations in power systems p739
Torsional interaction between an SSSC and a PSS in a series compensated power system p653
Use of an optimal criterion for co-ordinating FACTS-based stabilisers p345

OPTIMAL CONTROL

Co-ordinated hierarchical control strategy for multi-infeed HVDC systems p242
Evaluation of convergence rate in the auxiliary problem principle for distributed optimal power flow p525
Maximising penetration of wind generation in existing distribution networks p256
Optimal allocation of transmission rights in systems with FACTS devices p359
Robust damping of interarea oscillations with unified power-flow controller p733
Robust FACTS control design using the H loop-shaping method p352
Robust tuning of power system stabilisers using a Lyapunov method based genetic algorithm p585
Use of an optimal criterion for co-ordinating FACTS-based stabilisers p345

OPTIMISATION

Allocation of VAr support using LP and NLP based optimal power flows p377
Application of the Shapley Value on transmission cost allocation in the competitive power market environment p15
Decentralised DC load flow and applications to transmission management p600
Enhanced genetic algorithm-based fuzzy multi-objective approach to distribution network reconfiguration p615
Evolutionary optimisation method for multistorage hydrothermal scheduling p152
Genetic algorithm approach to the modelling of polluted insulators p373
Genetic algorithm for supply restoration and optimal load shedding in power system distribution networks p145
Goal-attainment method for optimal multi-objective harmonic filter planning in industrial distribution systems p557
Interior point method applied to voltage collapse problems and system-losses-reduction p165
Method for considering uncertainties for robust tuning of PSS and evaluation of stability limits p295
Natural dynamic equilibrium and multiple equilibria of competitive power markets p133
Optimal configurations for taps of windings and power electronic switches in electronic tap-changers p517
Optimally co-ordinated bidding strategies in energy and ancillary service markets p331
Power system voltage control by multiple STATCOMs based on learning humoral immune response p416
Robust tuning of power system stabilisers using a Lyapunov method based genetic algorithm p585

PARAMETER ESTIMATION

Adaptive underfrequency load shedding integrated with a frequency estimation numerical algorithm p713
Long arc in free air: laboratory testing, modelling, simulation and model-parameters estimation p319

PLASMA TECHNOLOGY

Dynamic current-zero behaviour of wall-stabilised arc in different arc-quenching media p510

POWER CONVERTERS

A flexible DSTATCOM operating in voltage or current control mode p215
A simple control scheme for hybrid active power filter p485
Advanced modelling of the harmonic impedances of AC-DC converters p700
Analysis of isolated self-excited induction generator feeding a rectifier load p90
Co-ordinated hierarchical control strategy for multi-infeed HVDC systems p242
Control of a battery supported dynamic voltage restorer p533
Evaluation of a shunt active power conditioner with a modified control scheme under nonperiodic conditions p726
Investigation of the performance of a photovoltaic AC module p472
Pulse width modulated series compensator p71
Reliability evaluation of hybrid multiterminal HVDC subtransmission systems p571
Robust nonlinear co-ordinated excitation and TCSC control for power systems p367
Three-phase single-stage high-voltage DC converter p505

POWER ELECTRONICS

Optimal configurations for taps of windings and power electronic switches in electronic tap-changers p517
Three-phase single-stage high-voltage DC converter p505

POWER ENGINEERING COMPUTING

Abductive network model-based diagnosis system for power transformer incipient fault detection p326
Adaptive underfrequency load shedding integrated with a frequency estimation numerical algorithm p713
Application of cell immune response modelling to power system voltage control by STATCOM p102
Artificial neural network based peak load forecasting using Levenberg-Marquardt and quasi-Newton methods p578
Co-ordinated control of generator excitation and STATCOM for rotor angle stability and voltage regulation enhancement of power systems p659
Constant Jacobian matrix and its application to fast trajectory simulation of power systems p210
Decentralised approach for congestion management and congestion price discovering p645
Decentralised DC load flow and applications to transmission management p600
Effective algorithm for handling constraints in generator maintenance scheduling p274
Electric power quality disturbance classification using self-adapting artificial neural networks p98
Evaluation of convergence rate in the auxiliary problem principle for distributed optimal power flow p525
Global model for short-term load forecasting using artificial neural networks p121
Initialisation of the augmented Hopfield network for improved generator scheduling p593
Iterative method for waveshape restoration of directly measured lightning flash currents p66
Load-frequency control and inadvertent interchange evaluation in restructured power systems p607
Locational marginal price forecasting in deregulated electricity markets using artificial intelligence p621
Long arc in free air: laboratory testing, modelling, simulation and model-parameters estimation p319
Optimal allocation of transmission rights in systems with FACTS devices p359
Pulse width modulated series compensator p71
Regularisation of neural networks for improved load forecasting in the power system p340
Transient voltage and current distributions on transmission lines p705
Use of an optimal criterion for co-ordinating FACTS-based stabilisers p345

POWER SYSTEM CONTROL

A flexible DSTATCOM operating in voltage or current control mode p215
A simple control scheme for hybrid active power filter p485
Adaptive underfrequency load shedding integrated with a frequency estimation numerical algorithm p713
Application of cell immune response modelling to power system voltage control by STATCOM p102
Assessment of generator impact on system power transfer capability using modal participation factors p564
Capability charts for combined cycle power plants p407
Centralised control of diesel gen-sets for peak shaving and system support p126
Co-ordinated control of generator excitation and STATCOM for rotor angle stability and voltage regulation enhancement of power systems p659
Co-ordinated hierarchical control strategy for multi-infeed HVDC systems p242
Constant Jacobian matrix and its application to fast trajectory simulation of power systems p210
Control of a battery supported dynamic voltage restorer p533
Control strategies of selective harmonic current shunt active filter p689
Damping of the low-frequency oscillations of the generator: dynamic interactions and the effectiveness of the controllers p753
Damping subsynchronous resonance in power systems p679
Decentralised DC load flow and applications to transmission management p600
Design of UPFC controllers and supplementary damping controller for power transmission control and stability enhancement of a longitudinal power system p463
Determination of the power transfer capacity of a UPFC with consideration of the system and equipment constraints and of installation locations p114
Dynamic selective harmonic elimination of a three-level inverter used for static VAr compensation p83
Dynamic-state-estimation scheme including nonlinear measurement-function considerations p673
Evaluation of a shunt active power conditioner with a modified control scheme under nonperiodic conditions p726
Evaluation of convergence rate in the auxiliary problem principle for distributed optimal power flow p525
Experimental studies with simple neuro-controller based excitation controller p108
Framework for dynamic congestion management in open power markets p157
Homogeneous cutting-plane method to solve the security-constrained economic dispatching problem p139
Improvement of precise P/V curve considering effects of voltage-dependent load models and transmission losses for voltage stability analysis p384
Initialisation of the augmented Hopfield network for improved generator scheduling p593
Interior point method applied to voltage collapse problems and system-losses-reduction p165
Load-frequency control and inadvertent interchange evaluation in restructured power systems p607
Maximising penetration of wind generation in existing distribution networks p256
Method for considering uncertainties for robust tuning of PSS and evaluation of stability limits p295
Multipurpose shunt active power conditioner p719
Optimal allocation of transmission rights in systems with FACTS devices p359
Passivation controller design for turbo-generators based on generalised Hamiltonian system theory p305
Power system voltage control by multiple STATCOMs based on learning humoral immune response p416
Pulse width modulated series compensator p71
Robust damping controller design for a static compensator p491
Robust damping of interarea oscillations with unified power-flow controller p733
Robust FACTS control design using the H loop-shaping method p352
Robust nonlinear co-ordinated excitation and TCSC control for power systems p367
Robust pole placement versus root-locus approach in the context of damping interarea oscillations in power systems p739
Robust tuning of power system stabilisers using a Lyapunov method based genetic algorithm p585
Self-correction two-machine equivalent model for stability control of FACT system using real-time phasor measurements p389
Steady-state analysis and performance of a single-phase self-regulated self-excited induction generator p233
Study of four-phase power transmission systems p397
Torsional interaction between an SSSC and a PSS in a series compensated power system p653
Transformerless dynamic voltage restorer p263
Use of an optimal criterion for co-ordinating FACTS-based stabilisers p345
Voltage stability assessment for real-time operation p175

POWER SYSTEM MANAGEMENT

A flexible DSTATCOM operating in voltage or current control mode p215
A simple control scheme for hybrid active power filter p485
Adaptive underfrequency load shedding integrated with a frequency estimation numerical algorithm p713
Application of cell immune response modelling to power system voltage control by STATCOM p102
Application of the Shapley Value on transmission cost allocation in the competitive power market environment p15
Bidding strategies based on bid sensitivities in generation auction markets p21
Bus-oriented transmission loss allocation p402
Co-ordinated control of generator excitation and STATCOM for rotor angle stability and voltage regulation enhancement of power systems p659
Damping subsynchronous resonance in power systems p679
Decentralised approach for congestion management and congestion price discovering p645
Decentralised congestion management of interconnected power systems p432
Decentralised DC load flow and applications to transmission management p600
Dynamic selective harmonic elimination of a three-level inverter used for static VAr compensation p83
Dynamic-state-estimation scheme including nonlinear measurement-function considerations p673
Framework for dynamic congestion management in open power markets p157
Fuzzy decision-making in stochastic multiobjective short-term hydrothermal scheduling p191
Genetic algorithm for supply restoration and optimal load shedding in power system distribution networks p145
Homogeneous cutting-plane method to solve the security-constrained economic dispatching problem p139
Integrated bidding strategies by optimal response to probabilistic locational marginal prices p633
Lessons learned from the power outages on 29 July and 21 September 1999 in Taiwan p543
Load-frequency control and inadvertent interchange evaluation in restructured power systems p607
Load recovery in different industries following an outage p76
Locational marginal price forecasting in deregulated electricity markets using artificial intelligence p621
Method for computing probability distributions of available transfer capability p427
Natural dynamic equilibrium and multiple equilibria of competitive power markets p133
Optimal power flow with inter-temporal constraints as an aiding tool for demand-side management p37
Optimally co-ordinated bidding strategies in energy and ancillary service markets p331
Quantitative reliability considerations in the determination of performance-based rates and customer service disruption payments p640
Robust damping controller design for a static compensator p491
Self-correction two-machine equivalent model for stability control of FACT system using real-time phasor measurements p389
Transmission embedded cost allocation using sensitivity analysis p627

POWER SYSTEM PROTECTION

Adaptive underfrequency load shedding integrated with a frequency estimation numerical algorithm p713
Earth faults and related disturbances in distribution networks p283
Evaluation of mesh and touch voltage at substations p201
Review of the basic insulation level for 400 kV oil-filled cable systems under lightning events p550
Voltage distribution studies on ZnO arresters p457

POWER SYSTEMS AND APPLICATIONS

Control strategies of selective harmonic current shunt active filter p689
Goal-attainment method for optimal multi-objective harmonic filter planning in industrial distribution systems p557

Load recovery in different industries following an outage p76

POWER SYSTEMS AND PLANTS

A flexible DSTATCOM operating in voltage or current control mode p215
A simple control scheme for hybrid active power filter p485
Allocation of VAr support using LP and NLP based optimal power flows p377
Artificial neural network based peak load forecasting using Levenberg-Marquardt and quasi-Newton methods p578
Assessment of generator impact on system power transfer capability using modal participation factors p564
Bidding strategies based on bid sensitivities in generation auction markets p21
Capability charts for combined cycle power plants p407
Centralised control of diesel gen-sets for peak shaving and system support p126
Co-ordinated control of generator excitation and STATCOM for rotor angle stability and voltage regulation enhancement of power systems p659
Constant Jacobian matrix and its application to fast trajectory simulation of power systems p210
Contributions of individual generators to complex power losses and flows. I. Fundamental theory p182
Contributions of individual generators to complex power losses and flows. II. Algorithm and simulations p186
Control strategies of selective harmonic current shunt active filter p689
Damping subsynchronous resonance in power systems p679
Effective algorithm for handling constraints in generator maintenance scheduling p274
Efficient multiway graph partitioning method for fault section estimation in large-scale power networks p289
Electric power quality disturbance classification using self-adapting artificial neural networks p98
Electrical generators for direct drive wave energy converters p446
Enhanced genetic algorithm-based fuzzy multi-objective approach to distribution network reconfiguration p615
Evaluation of a shunt active power conditioner with a modified control scheme under nonperiodic conditions p726
Evaluation of mesh and touch voltage at substations p201
Evolutionary optimisation method for multistorage hydrothermal scheduling p152
Fuzzy decision-making in stochastic multiobjective short-term hydrothermal scheduling p191
Global model for short-term load forecasting using artificial neural networks p121
Goal-attainment method for optimal multi-objective harmonic filter planning in industrial distribution systems p557
Homogeneous cutting-plane method to solve the security-constrained economic dispatching problem p139
Initialisation of the augmented Hopfield network for improved generator scheduling p593
Integrated bidding strategies by optimal response to probabilistic locational marginal prices p633
Integrated reliability evaluation of generation, transmission and distribution systems p1
Iterative method for waveshape restoration of directly measured lightning flash currents p66
Maximising penetration of wind generation in existing distribution networks p256
Multipurpose shunt active power conditioner p719
Power system voltage control by multiple STATCOMs based on learning humoral immune response p416
Regularisation of neural networks for improved load forecasting in the power system p340
Review of the basic insulation level for 400 kV oil-filled cable systems under lightning events p550
Robust damping controller design for a static compensator p491
Robust nonlinear co-ordinated excitation and TCSC control for power systems p367
Self-correction two-machine equivalent model for stability control of FACT system using real-time phasor measurements p389
Succinct method for allocation of network losses p171
Test systems and mathematical models for transmission network expansion planning p27
Transformerless dynamic voltage restorer p263
Using voltage measurements to improve the results of branch-current-based state estimators for distribution systems p667
Vulnerability of hydropower projects to climate change p249
Wavelet-based signal processing for disturbance classification and measurement p310

POWER TRANSMISSION AND DISTRIBUTION

A flexible DSTATCOM operating in voltage or current control mode p215
A simple control scheme for hybrid active power filter p485
Allocation of VAr support using LP and NLP based optimal power flows p377
Analytical approach to probabilistic prediction of voltage sags on transmission networks p7
Application of the Shapley Value on transmission cost allocation in the competitive power market environment p15
Assessment of generator impact on system power transfer capability using modal participation factors p564
Bus-oriented transmission loss allocation p402
Co-ordinated hierarchical control strategy for multi-infeed HVDC systems p242
Compact and flexible three-phase power flow based on a full Newton formulation p225
Contributions of individual generators to complex power losses and flows. I. Fundamental theory p182
Contributions of individual generators to complex power losses and flows. II. Algorithm and simulations p186
Control strategies of selective harmonic current shunt active filter p689
Damping subsynchronous resonance in power systems p679
Decentralised approach for congestion management and congestion price discovering p645
Decentralised congestion management of interconnected power systems p432
Decentralised DC load flow and applications to transmission management p600
Design of UPFC controllers and supplementary damping controller for power transmission control and stability enhancement of a longitudinal power system p463
Determination of the power transfer capacity of a UPFC with consideration of the system and equipment constraints and of installation locations p114
Dynamic selective harmonic elimination of a three-level inverter used for static VAr compensation p83
Earth faults and related disturbances in distribution networks p283
Electric power quality disturbance classification using self-adapting artificial neural networks p98
Enhanced genetic algorithm-based fuzzy multi-objective approach to distribution network reconfiguration p615
Evaluation of a shunt active power conditioner with a modified control scheme under nonperiodic conditions p726
Framework for dynamic congestion management in open power markets p157
Genetic algorithm for supply restoration and optimal load shedding in power system distribution networks p145
Goal-attainment method for optimal multi-objective harmonic filter planning in industrial distribution systems p557
Improvement of precise P/V curve considering effects of voltage-dependent load models and transmission losses for voltage stability analysis p384
Improving power quality by sub-cycle transfer switches: a criterion for the evaluation of alternate sources independence p695
Iterative solvers in the Newton power flow problem: preconditioners, inexact solutions and partial Jacobian updates p479
Long arc in free air: laboratory testing, modelling, simulation and model-parameters estimation p319
Maximising penetration of wind generation in existing distribution networks p256
Method for computing probability distributions of available transfer capability p427
Multipurpose shunt active power conditioner p719
Optimal allocation of transmission rights in systems with FACTS devices p359
Optimal power flow with inter-temporal constraints as an aiding tool for demand-side management p37
Pulse width modulated series compensator p71
Quantifying electric power quality via fuzzy modelling and analytic hierarchy processing p44
Quantitative reliability considerations in the determination of performance-based rates and customer service disruption payments p640
Reliability evaluation of hybrid multiterminal HVDC subtransmission systems p571
Robust damping of interarea oscillations with unified power-flow controller p733
Robust FACTS control design using the H loop-shaping method p352
Robust nonlinear co-ordinated excitation and TCSC control for power systems p367
Self-correction two-machine equivalent model for stability control of FACT system using real-time phasor measurements p389
Study of four-phase power transmission systems p397
Test systems and mathematical models for transmission network expansion planning p27
Transformerless dynamic voltage restorer p263
Transient voltage and current distributions on transmission lines p705
Transmission embedded cost allocation using sensitivity analysis p627
Use of an optimal criterion for co-ordinating FACTS-based stabilisers p345
Using voltage measurements to improve the results of branch-current-based state estimators for distribution systems p667
Voltage stability assessment for real-time operation p175
Wavelet-based signal processing for disturbance classification and measurement p310

PRODUCTION ENGINEERING

Nonstandard method for accelerated ageing tests of nonceramic insulators p439

RELIABILITY

Analytical approach to probabilistic prediction of voltage sags on transmission networks p7
Framework for dynamic congestion management in open power markets p157
Integrated reliability evaluation of generation, transmission and distribution systems p1
Lessons learned from the power outages on 29 July and 21 September 1999 in Taiwan p543
Quantitative reliability considerations in the determination of performance-based rates and customer service disruption payments p640
Reliability evaluation of hybrid multiterminal HVDC subtransmission systems p571
Study of four-phase power transmission systems p397

SIGNAL PROCESSING

Wavelet-based signal processing for disturbance classification and measurement p310

SIMULATION, MODELLING AND IDENTIFICATION

Dynamic-state-estimation scheme including nonlinear measurement-function considerations p673

SOFTWARE TECHNIQUES

Effective algorithm for handling constraints in generator maintenance scheduling p274

STATISTICAL ANALYSIS

Analytical approach to probabilistic prediction of voltage sags on transmission networks p7
Combined wavelet transform and regression technique for secondary current compensation of current transformers p497
Fuzzy decision-making in stochastic multiobjective short-term hydrothermal scheduling p191
Integrated bidding strategies by optimal response to probabilistic locational marginal prices p633
Integrated reliability evaluation of generation, transmission and distribution systems p1
Method for computing probability distributions of available transfer capability p427
Natural dynamic equilibrium and multiple equilibria of competitive power markets p133
Optimally co-ordinated bidding strategies in energy and ancillary service markets p331
Quantitative reliability considerations in the determination of performance-based rates and customer service disruption payments p640

SUPERCONDUCTING MATERIALS AND DEVICES

Robust pole placement versus root-locus approach in the context of damping interarea oscillations in power systems p739

SWITCHGEAR

Dynamic current-zero behaviour of wall-stabilised arc in different arc-quenching media p510
Improving power quality by sub-cycle transfer switches: a criterion for the evaluation of alternate sources independence p695

SYNCHRONOUS MACHINES

Damping of the low-frequency oscillations of the generator: dynamic interactions and the effectiveness of the controllers p753
Experimental studies with simple neuro-controller based excitation controller p108

TELEMETRY

Centralised control of diesel gen-sets for peak shaving and system support p126

TRANSFORMERS

Abductive network model-based diagnosis system for power transformer incipient fault detection p326
Combined wavelet transform and regression technique for secondary current compensation of current transformers p497
Incorporating capacitance into partial-core transformer models to determine first natural resonant frequencies p746
Optimal configurations for taps of windings and power electronic switches in electronic tap-changers p517
